

Assignment no 9

Laravel Project Setup — A Complete Guide

1. Open the XAMPP Directory Launch Command Prompt and navigate your working directory to the XAMPP htdocs folder using the path below:

```
C:\xampp\htdocs
```

2. Create a New Laravel Project Once you are inside the directory, run the following command to create a brand new Laravel project named **daniyal**:

```
laravel new daniyal
```

3. Configure the Installation Settings As the setup process runs, respond to each prompt with the options listed below. Select **None** for the Starter Kit and **0** for the Testing Framework. Choose **No** for AI-assisted coding and set the database to **MySQL**. When asked about default database migration, select **Yes**, and similarly select **Yes** for ignoring scripts.

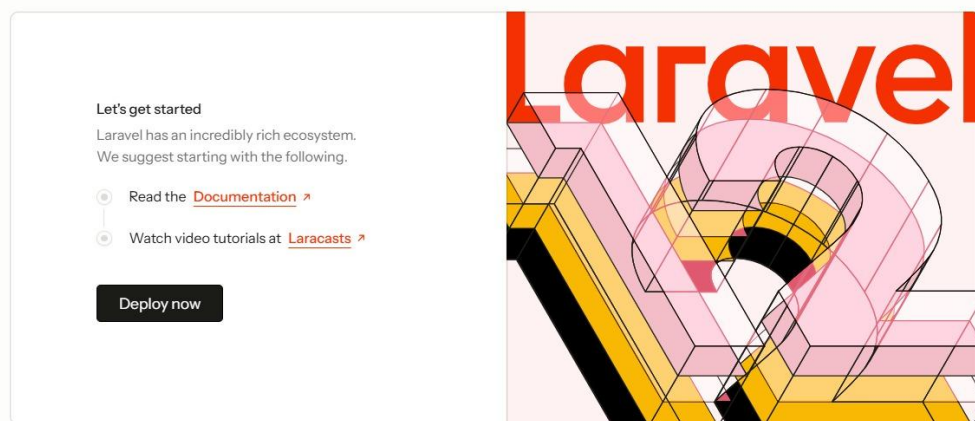

4. Launch the Development Server Once the project has been created successfully, move into the project folder and start the local development server using the commands below:

```
cd daniyal
```

```
composer run dev
```

5. View the Application in Browser Open your preferred browser and type the following URL to confirm that your Laravel application is running correctly:

<http://localhost:8000>

Creating a View and Defining a Route in Laravel

1. Create the View File Open your terminal and run the following command to create a new view file named **home**:

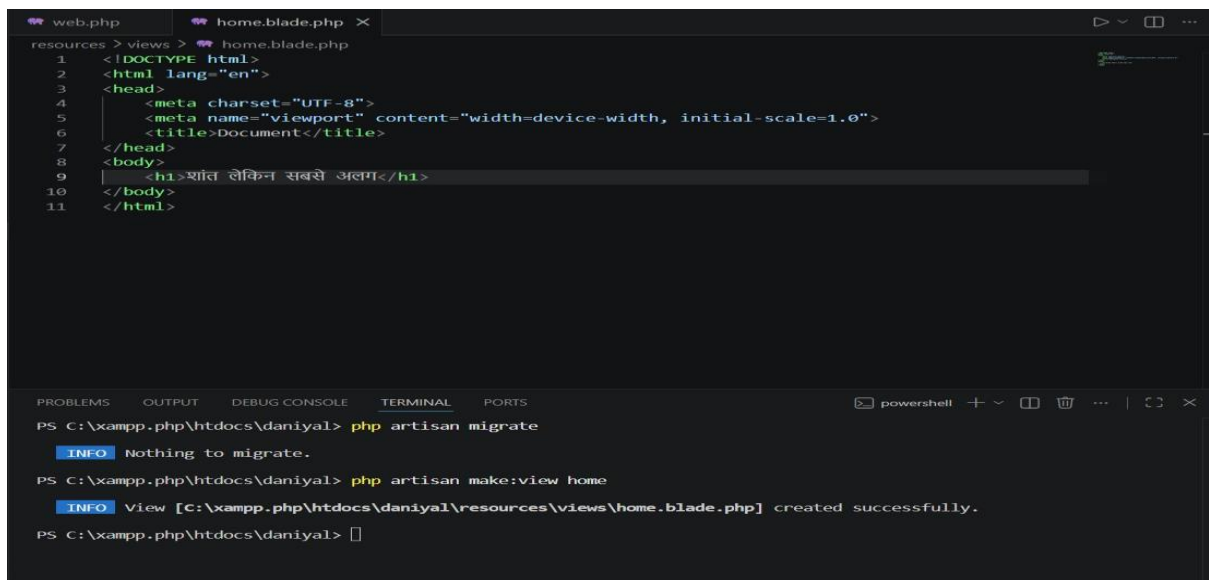

```
php artisan make:view home
```

2. Define the Route Navigate to the web.php file and define a route for the home page. This tells Laravel how to recognize and respond to any requests sent to that URL.

3. Edit the Blade Template Open the home.blade.php file and insert the necessary HTML content. This content will build the overall structure and appearance of your home page.

4. Save and Preview in Browser Once all changes are saved, open your browser and visit the URL below to see your home page displayed live:

<http://localhost:8000/home>

The screenshot shows the VS Code editor with the `home.blade.php` file open. The file contains the following HTML code:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9   <h1>शांत लेकिन सबसे अलग</h1>
10 </body>
11 </html>
```

Below the editor, the terminal window shows the following commands and output:

```
PS C:\xampp.php\htdocs\daniyal> php artisan migrate
INFO: Nothing to migrate.

PS C:\xampp.php\htdocs\daniyal> php artisan make:view home
INFO: View [C:\xampp.php\htdocs\daniyal\resources\views\home.blade.php] created successfully.

PS C:\xampp.php\htdocs\daniyal>
```

Creating a View and Defining a Route in Laravel

1. Create the View File Open your terminal and run the following command to create a new view file named **about**:

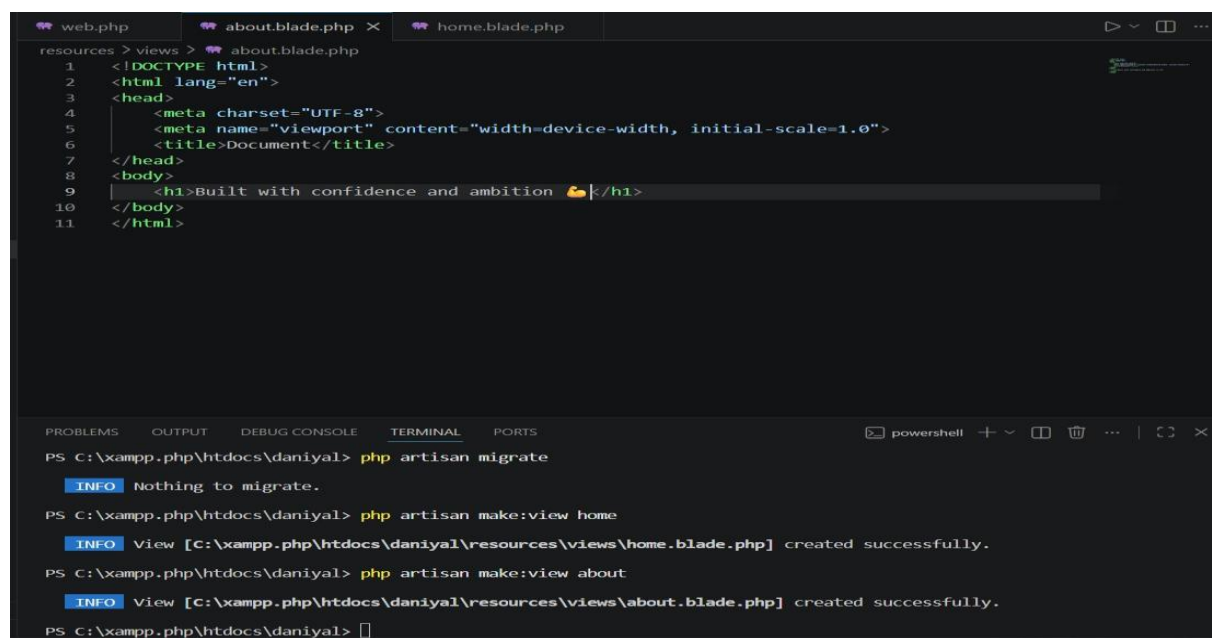

```
php artisan make:view about
```

2. Define the Route Navigate to the web.php file and define a route for the about page. This tells Laravel how to recognize and respond to any requests sent to that URL.

3. Edit the Blade Template Open the about.blade.php file and insert the necessary HTML content. This content will build the overall structure and appearance of your about page.

4. Save and Preview in Browser Once all changes are saved, open your browser and visit the URL below to see your about page displayed live:

<http://localhost:8000/about>

The screenshot shows a code editor with three tabs: web.php, about.blade.php, and home.blade.php. The about.blade.php file is open, showing the following HTML content:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9   <h1>Built with confidence and ambition 🏆</h1>
10 </body>
11 </html>
```

Below the code editor is a terminal window showing the following commands and output:

```
PS C:\xampp.php\htdocs\daniyal> php artisan migrate
[INFO] Nothing to migrate.

PS C:\xampp.php\htdocs\daniyal> php artisan make:view home
[INFO] View [C:\xampp.php\htdocs\daniyal\resources\views\home.blade.php] created successfully.

PS C:\xampp.php\htdocs\daniyal> php artisan make:view about
[INFO] View [C:\xampp.php\htdocs\daniyal\resources\views\about.blade.php] created successfully.

PS C:\xampp.php\htdocs\daniyal>
```
